Emergency Temporary Waiver of Reid Vapor Pressure Requirements for Gasoline

The State of Kansas will permit the sale and use of gasoline with a Reid Vapor Pressure (RVP) of 13.5 psi through October 31, 2008. This action is deemed necessary to ensure that an adequate fuel supply in the state of Kansas is not disrupted due to damage and distribution delays caused by recent hurricanes and tropical storms.

Effective September 18 through October 31, 2008, the RVP for gasoline may not exceed 13.5 psi. All other state and ASTM gasoline specifications are required and must be met. All state and ASTM gasoline specifications will be in effect on November 1, 2008.
